

## Esso Australia Bass Strait Field Development, Australia

Uhde was commissioned by Esso Australia to assist in the selection of a field development concept for a new gas field in Australia's Bass Strait. The concepts ranged from maximum use of existing infrastructure in multiple locations to installation of a new platform and pipeline. Uhde defined the process, flow assurance, construction, operations, capital and operating costs and schedule parameters associated with each option. The preferred platform upgrade option was then converted to a FEED package.
